Economic Benefit Study

Prepared for Goldblaze Nominees
November 2023

CONTENTS

Key Findings	3
Report Purpose & Proposed Development	4
Construction Phase Benefits	5
Ongoing Employment Benefits	6
Other Benefits of Development	7
Additional Project Value	12
Methodology, Definitions & Assumptions	13

KEY FINDINGS

The proposed mixed use development at Lots 2 & 3 (Nos. 167 & 169) Bank Street, East Victoria Park is anticipated to provide new retail offerings alongside residential apartments.

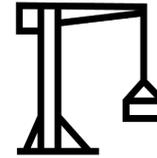

The project will provide 85 residential apartments and 94.5 sq.m of retail floorspace across the development.

Construction of the entire development will support a total of **90 FTE direct & indirect jobs** during construction of the development, with many accruing locally. This equates to **approximately \$34 million in total value added** to the WA economy.

Once construction is completed and during the operational phase, the project is expected to support **5 ongoing jobs (directly and indirectly)**. There will be an estimated **\$0.5 M per annum direct and indirect value-added** contributions generated from the daily operation and management of the project to the Western Australian economy.

The project is within The Oats Street Station Precinct which has been identified in State and Local Government planning frameworks as having the potential for greater development. The 85 apartments is below the average number of apartments in larger scale new apartment buildings (buildings of 25 or more apartments) and will add needed supply to a recognised growth precinct. The 136 estimated residents of the proposed development equates to a very small proportion of the Town of Victoria Park's forecast population growth.

CONSTRUCTION PHASE BENEFITS

\$29.5 M

Total development cost (inc. GST) for all components

90

Total FTE construction jobs supported (directly and indirectly)

\$34 M

Total value added in the WA economy over the construction phase

ONGOING EMPLOYMENT & ECONOMIC BENEFITS

TOWN OF VICTORIA PARK
Received: 15/02/2024

5

Ongoing jobs supported per annum (directly and indirectly)

\$0.5 M

Value added in the WA economy per annum attributable to operations on-site

\$5.2 M

Total Estimated Resident Retail Expenditure

~ 136

New Residents

Note: Ongoing employment figures presented are the gross number of jobs supported by the development (i.e. not net of existing use on the subject site).

Report Purpose

Urbis has been engaged by Goldblaze Nominees to conduct an independent Economic Benefit Report for the proposed development at 167 & 169 Bank Street in East Victoria Park.

This analysis supplements Urbis' in-house knowledge with data from the REMPLAN modelling tool to quantify the potential employment and economic benefits likely to be generated by the development. These benefits will accrue during both the construction phase and on an ongoing operational basis. The methodology is explained further later in this report.

Potential employment and economic benefits are presented for each individual component of development, as well as aggregated contributions generated from the entire project at the completion of the construction phase for the entire development.

Proposed Development

According to information received from Goldblaze Nominees, the proposed development is anticipated to see the delivery of the following uses:

- 23 one-bedroom apartments and 62 two-bedroom apartments, and
- 94.5 sq.m of retail floorspace.

These components will be developed across an anticipated total **construction timeframe of 24 months.**

Assumptions

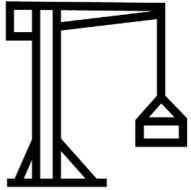

TOWN OF VICTORIA PARK
Received: 15/02/2024

Urbis has been provided with construction costs and timing by Goldblaze Nominees:

- The construction cost is estimated to be **around \$24.6 million (inc GST).**
- There is an additional cost of approximately \$4.9 million (inc GST) in interest, contingency allowances and consultant-related costs.

CONSTRUCTION PHASE BENEFITS

TOWN OF VICTORIA PARK
Received: 15/02/2024

The proposed development is estimated to have a total construction cost of around **\$24.6 million (inc GST) with an additional cost of approximately \$4.9 million (inc GST) in interest, contingency allowances and consultant related costs** over an assumed construction timeframe of 24 months. This results in an **annualised cost of around \$14.7 million inclusive of GST during the construction phase.**

Annual Average full-time equivalent jobs supported

18
DIRECT FTE* JOBS

Avg. direct FTE jobs per year during construction

27
INDIRECT FTE* JOBS

Avg. indirect FTE jobs per year during construction

Annual Gross value added to the State economy

\$12.4 M
DIRECT GVA*

Avg. annual direct GVA to the State economy

\$4.6 M
INDIRECT GVA*

Avg. annual indirect GVA to the State economy

On average, **45 FTE direct & indirect** construction jobs are likely to be created for the State on an annualised basis during construction of the development (totalling **90 FTE construction job years, directly & indirectly** over the development timeframe), with many accruing locally.

Total direct and indirect Gross Value-Added to the State economy is estimated at **\$17 million per annum** over the construction period of the development in constant 2023 dollars.

* FTE = Full-Time Equivalent, GVA = Gross Value Added, Indirect benefits refer to Supply Chain effects, but not Consumption Effects. See Definitions in the Appendix for more information.

Source: REMPLAN; Goldblaze Nominees; Urbis

ONGOING EMPLOYMENT & ECONOMIC BENEFITS

TOWN OF VICTORIA PARK
Received: 15/02/2024

Upon completion, the proposed development will support around **four direct jobs** (full-time, part-time and casual) across the F&B space. The figures presented are the gross number of jobs supported by the development (i.e. not net of existing use on the subject site).

The jobs supported by the proposed development will be ongoing over the life of the asset with that activity in turn creating permanent jobs elsewhere through the economy.

The direct jobs are estimated to induce a further **1 additional indirect job** within Western Australia as a result of flow-on effects.

There will be an estimated **\$0.5 M** per annum in direct and indirect GVA contribution generated from the daily operation and management of the development to the WA economy.

Total on-going jobs supported by on-site operations

4

DIRECT JOBS

1

INDIRECT JOBS

Total direct jobs on an ongoing basis at capacity

Total indirect jobs supported by on-site employment

Gross value added to the State economy

\$0.4 M

DIRECT GVA*

Avg. annual direct GVA to the State economy

\$0.1 M

INDIRECT GVA*

Avg. annual indirect GVA to the State economy

* GVA = Gross Value Added, Indirect benefits refer to Supply Chain effects, but not Consumption Effects. See Definitions in the Appendix for more information.

Note: Ongoing jobs may not be new to the state economy as there may be some transfer from other locations. However in the absence of the proposed investment, they would unlikely be provided elsewhere in the short-term, and in that respect are considered additional.

Source: REMPLAN; Goldblaze Nominees; Urbis

OTHER BENEFITS OF DEVELOPMENT

TOWN OF VICTORIA PARK
Received: 15/02/2024

Revenue Generated by Development

The proposed development mix of the 85 apartments is estimated to support a resident population of ~136 people. This is based on 23 one bedroom apartments and 62 two bedroom apartments.

A diverse population is expected to be supported by the delivery of dwellings with varying facilities / amenities, dwelling characteristics and price points.

These additional residents are anticipated to add an additional \$5.2 million of retail expenditure to the area after completion of the development, which is expected to continue on an annual basis going forward. These new residents will support the revitalization of the Oats Street Station Precinct.

New Residents

Estimated Total Retail Expenditure Generated by New Residents

ADDITIONAL PROJECT VALUE

TOWN OF VICTORIA PARK
Received: 15/02/2024

Value of Place Framework

Using the Urbis Value of Place Wheel Framework, we have considered other benefits that have been highlighted on the right.

Source: Urbis Pty Ltd (an Australian company) / Cistri Pte Ltd

Other Benefits

Beyond the quantification of economic contributions already identified, the proposed investment also presents broader benefits to the local area, including, but not limited to:

- Bringing additional residents to the area to support the existing retailers and activate the area;
- Supporting additional visitation to East Victoria Park and supporting the existing businesses in the area;
- Provide additional housing diversity to East Victoria Park in close proximity to public transport and the redevelopment of Oats Street station;
- Attract further investment to the Oat Street precinct and support revitalisation of the area;
- Bring a new food and beverage space to East Victoria Park.
- Provide additional rates and taxes to federal, state and local government from new residents and workers in the development and;

FORECAST POPULATION GROWTH

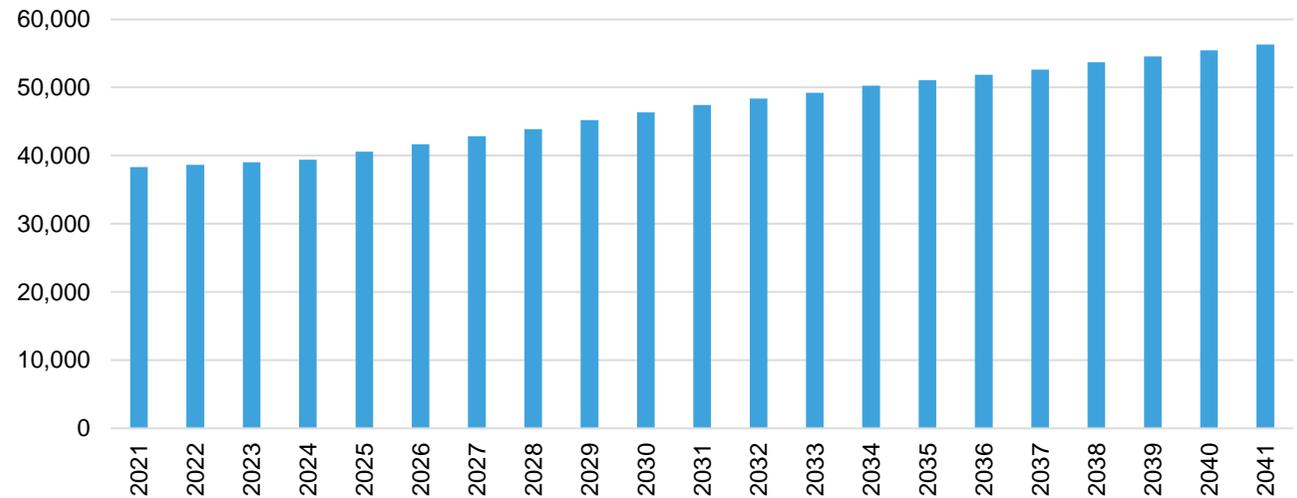

Population forecasts prepared by forecast.id estimate population growth of 17,995 people, or 47%, in the Town of Victoria Park over the two decades to 2041. This equates to an annual population growth of 1.9% or an average of approximately 900 additional residents per annum. The 136 estimated residents of the proposed development equates to a fraction of the Town's forecast population growth over the period, at 0.8%. The proposed development is estimated to deliver just 15% of a single year's forecast growth over the same period.

The forecast.id East Victoria Park – Kensington Small Area forecast shows an expected population growth of 13.87% within the precinct where the development is proposed.

Importantly, these forecasts were prepared by forecast.id in March 2023, and therefore do not account for population growth that may occur as a result of the Oats Street Station Precinct Plan. The Oats Street Station Precinct Plan is currently in development, with early work presented for public comment proposing two growth scenarios (*see source).

HISTORICAL DWELLING APPROVALS

The area where the proposed development is located has seen moderate levels of new dwelling supply (as measured by dwelling approvals) over the past four years.

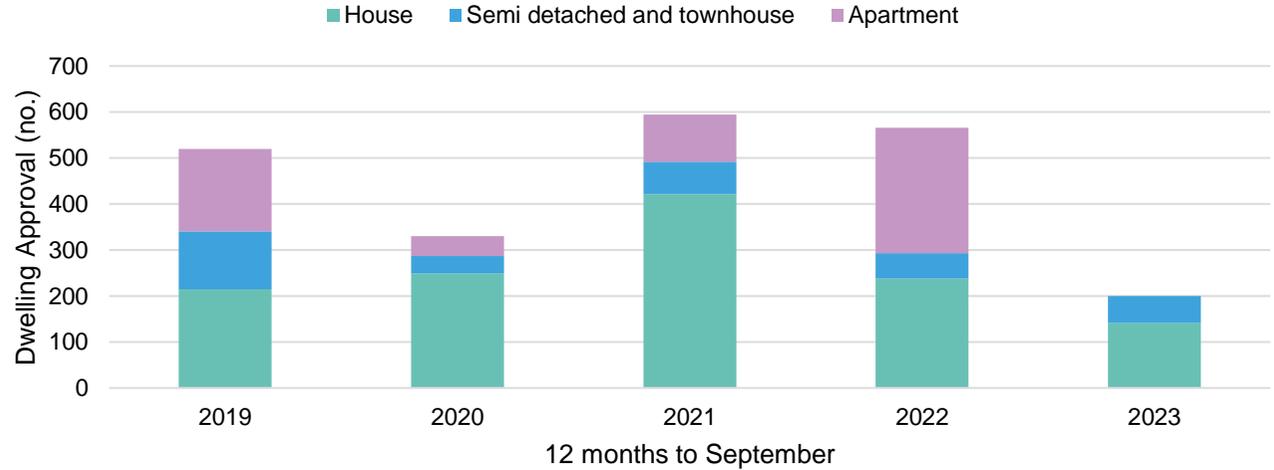

ABS data shows that significant levels of new dwellings have been approved in the region over the past five years, 27% being apartments. Dwelling approvals peaked at 595 in the 12 months to September 2021.

Within this setting, the proposed development's 85 dwellings do not translate to an unusually large increase in supply for the area. Additionally, increasing the supply of new apartments in the well-connected precinct will improve housing diversity in the area.

These figures relate to the Belmont – Victoria Park SA3, which is a Statistical Area has defined by the ABS.

MARKET CONTEXT MAP AND ESSENTIALS METHODOLOGY

Key Insights

The Urbis Perth Apartment Essentials survey covers 110 active apartment projects (projects that have launched through to completion but not sold out). Sales volumes are based on surveyed projects. Projects (with 25 or more apartments) that are not surveyed are monitored but sales and remaining apartments in buildings still in pre-sales are not captured.

Essentials focuses only on sales by developers not re-sales of apartments. The aim is to monitor market activity at any point in time. Hence where apartments are sold off the plan but do not settle and are then sold on completion both sales will be recorded.

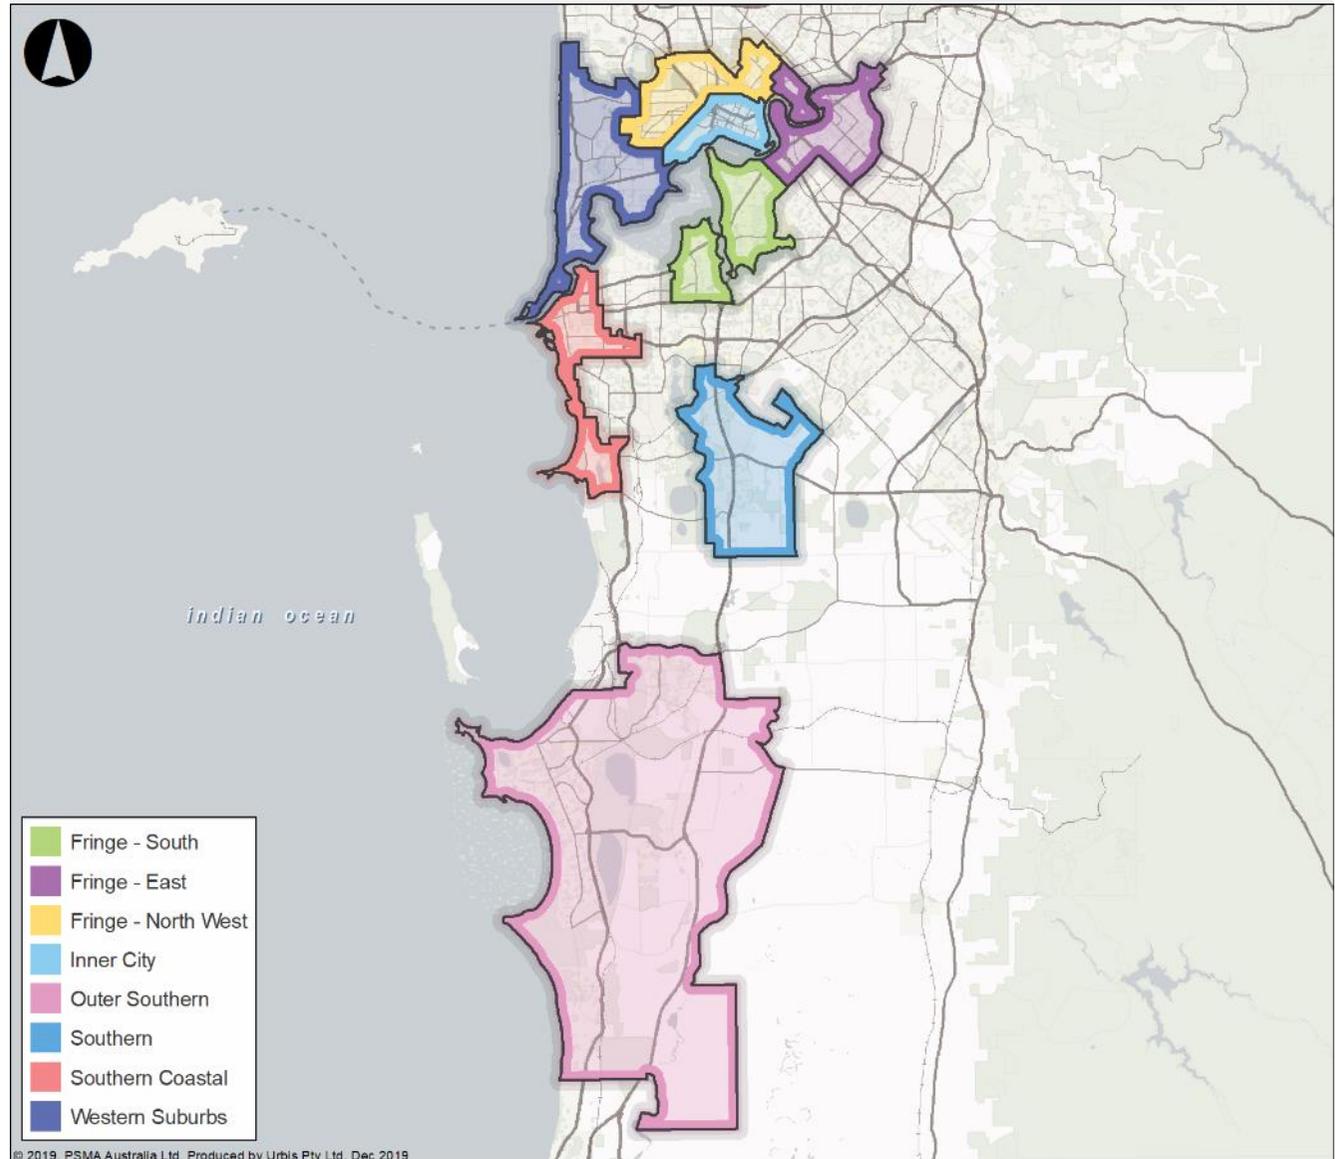

In addition, projects that are in the development application and approval stage are also monitored. This provides comprehensive data and analysis of apartment market dynamics, including the development supply pipeline, apartment demand, and take up rates.

In Perth, the survey covers projects across the metropolitan area which includes Inner City, Fringe East, Fringe North West, Fringe South, Southern Coastal, Western Suburbs, Southern, Outer Southern and Other areas.

The "Other" Precinct includes the remainder of suburbs within the Perth Metropolitan region.

Context Map – Perth Apartment Essentials Precinct Boundaries

TOWN OF VICTORIA PARK

Source: Urbis

APARTMENT SUPPLY

Data from Urbis' Perth Apartment Essentials highlights recent activity in the apartment market surrounding the proposed development.

Historical apartment approvals in the Fringe South and Fringe East precincts have remained consistently above 400 dwellings approved per annum since 2015. This demonstrates the level of supply in the area from multiple projects, and the fact that the proposed 85 dwelling development represents a modest addition to this pipeline.

Further, the proposed number of dwellings on Bank Street is smaller than the average number of dwellings per project for active developments across Perth, at 94.

As well as approvals, there have been substantial numbers of apartments completed in the past five years, with a strong pipeline to 2025. An additional 85 dwellings at the proposed development is less than 10% of the active projects with expected completion in 2024 within the Fringe South and Fringe East precincts.

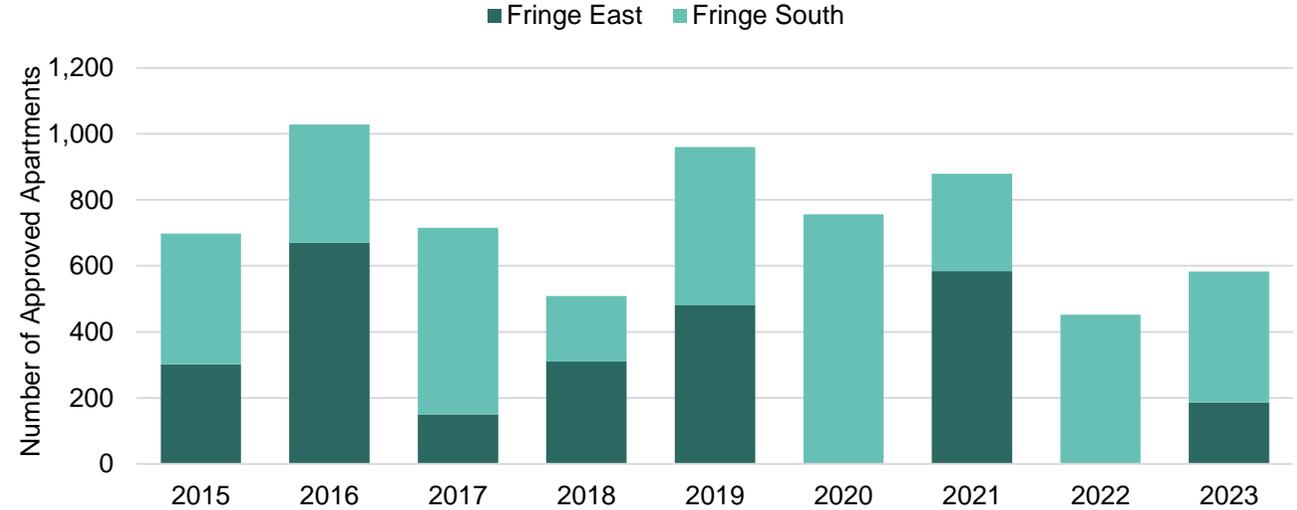

94

METHODOLOGY, DEFINITIONS & ASSUMPTIONS

DEFINITIONS & ASSUMPTIONS

Definitions

Construction cost is the estimated investment value for the project over the anticipated delivery period, measured in constant 2023 dollar (i.e. excluding inflation) including GST.

Gross Value Added or **GVA** is a measure of the value of goods and services produced in an area, industry or sector of an economy during a certain period of time. In this case, GVA represents the total economic contribution of the investment in the project. GVA is measured in constant 2023 dollar (i.e. excluding inflation) including GST.

Construction job years is a measurement of the volume of output required to support a construction job for a 12 month period.

Data Sources

Costs and Timeframes – Rowe Group 9/11/2023 and 17/11/2023
Plans – Ryan Tsen Architects 09/11/2023

Assumptions

Average workspace ratios for this analysis have been taken from the results of the Perth Land Use and Employment Survey published in 2017. The relevant ratios used for this analysis by each component are the WASLUC and PLUC Codes as per the following:

TOWN OF VICTORIA PARK
 Received: 15/02/2024

Component	Ratio	PLUC Code / WASLUC Code
F&B	21.9	Retail Trade – Eating and Drinking

The number of separate house residents has been determined by number of people per separate house by bedroom type, based on the ABS 2021 Census across the Greater Perth region in four- to eight-storey apartment buildings. We have assumed a ratio of 1.7 for a two bedroom apartment.

Urbis has assumed use of commercial floorspace based on the size of tenancies. The table below outlines the assumed use per tenancy.

Type	Assumed Land Use	Floorspace (sq.m)
Commercial	F&B	94.5
Total Commercial Space		94.5

METHODOLOGY

The REMPLAN Methodology

Analysis presented here uses REMPLAN economic modelling to assess current and potential economic impacts. REMPLAN provides a modelling tool that is accepted and used by various government bodies in Australia. It uses an Input-Output model that captures inter-industry relationships within an economy, based on the ABS 2020/21 National Input Output Tables (I/O Tables). It can assess the area-specific direct and flow-on implications across industry sectors in terms of employment, wages and salaries, output and value-added, allowing for analysis of impacts at the State of Western Australia level.

Key points regarding the workings or terminology of the model are as follows:

- REMPLAN uses either the value of investment or employment generation as the primary input. For this analysis, the value of total upfront investment has been used as the key input to assess the benefits of the construction phase.
- Outputs from the model include employment generated through the project and economic Gross Value Added (GVA) at the State level.
- Outputs from the model include employment generated through the project at both the local and the state level.
- Employment generated is calculated over the life of the construction phase; or in terms of the on-going operations, total on-going jobs generated.
- Both the direct and indirect employment are modelled:
 - *Direct* refers to the effect felt within the industry as a result of the investment. For example, the construction phase will directly result in the creation of construction jobs.
 - *Indirect* effects are those felt within industries that supply goods to the industries directly affected.
- It should be noted that the results presented in this report are estimates only based on the existing state of economic activity in the area. Due to the static nature of input-output modelling, they have the potential to overstate the actual effects. The approach Urbis adopts in accounting for this is presented adjacent. Nonetheless, the analysis still reflects the fact that employment growth will be positive for the State and the local area.
- Urbis consider that in the absence of the investment package it is unlikely that similar projects would be undertaken within the same period, and therefore the investments can be considered *additional*.

Reporting of Impact Modelling Results

TOWN OF VICTORIA PARK
Received: 15/02/2024

Urbis have adopted a conservative approach to estimating and reporting economic and employment benefits using the REMPLAN modelling tool so as to not overstate the likely effects. Key areas where Urbis' approach is designed to not overstate the effects include:

- While REMPLAN defines the supply chain linkages between local industries and allows the assessment of multiplier effects as a result of a direct input into an industry, the nature of the ABS I/O Tables and indeed the set-up of the model suggests there is likely some double-counting therefore overstatement of the flow-on effects.
- More specifically, REMPLAN defines 'Indirect Effect' as consisting of both the 'Supply-chain Effect' and 'Consumption Effect'. However, Urbis believe that the consumption effect (i.e. workers with more income spend elsewhere in the economy) has already been counted to an extent as part of the supply-chain effect in the modelling process and is a more tenuous link to the direct effects. As such, Urbis have only excluded consumption effect from benefit reporting and consider supply-chain effect as the only indirect effect generated from the direct input.
- Construction-related jobs are reported as FTE jobs for the period of one year, rather than the number of workers who might work on a site over the construction period which building contractors might report. For example, a project might have 200 workers on-site over the course of a two-year construction, but that may only equate to say 50 FTE jobs per year. Each trade is not onsite for the whole time (e.g. plumbers, joiners, painters etc. all come on site at different stages). Therefore, FTE for one year accounts for the total hours required by workers over the year and avoids the potential to overstate or misinterpret job figures that relate to part time workers. It also allows for direct comparison of jobs with different construction timeframes, as the jobs accrue each year over the length of construction.
- Wherever applicable, Urbis have chosen to report *Gross Value Added (GVA)* rather than '*Output*' as the economic benefit of a certain development project or activity, as it is considered a more accurate, albeit conservative, estimate of benefit which excludes items such as tax and subsidies which are included in '*Output*'.

COVID-19 AND THE POTENTIAL IMPACT ON DATA INFORMATION

The data and information that informs and supports our opinions, estimates, surveys, forecasts, projections, conclusion, judgments, assumptions and recommendations contained in this report (Report Content) are predominantly generated over long periods, and is reflective of the circumstances applying in the past. Significant economic, health and other local and world events can, however, take a period of time for the market to absorb and to be reflected in such data and information. In many instances a change in market thinking and actual market conditions as at the date of this report may not be reflected in the data and information used to support the Report Content.

The recent international outbreak of the Novel Coronavirus (COVID-19), which the World Health Organisation declared a global health emergency in January 2020 and pandemic on 11 March 2020, has and continues to cause considerable business uncertainty which in turn materially impacts market conditions and the Australian and world economies more broadly.

The uncertainty has and is continuing to impact the Australian real estate market and business operations. The full extent of the impact on the real estate market and more broadly on the Australian economy and how long that impact will last is not known and it is not possible to accurately and definitively predict. Some business sectors, such as the retail, hotel and tourism sectors, have reported material impacts on trading performance. For example, Shopping Centre operators are reporting material reductions in foot traffic numbers, particularly in centres that ordinarily experience a high proportion of international visitors.

The data and information that informs and supports the Report Content is current as at the date of this report and (unless otherwise specifically stated in the Report) does not necessarily reflect the full impact of the COVID-19 Outbreak on the Australian economy,

the asset(s) and any associated business operations to which the report relates. It is not possible to ascertain with certainty at this time how the market and the Australian economy more broadly will respond to this unprecedented event and the various programs and initiatives governments have adopted in attempting to address its impact. It is possible that the market conditions applying to the asset(s) and any associated business operations to which the report relates and the business sector to which they belong has been, and may be further, materially impacted by the COVID-19 Outbreak within a short space of time and that it will have a longer lasting impact than we have assumed. Clearly, the COVID-19 Outbreak is an important risk factor you must carefully consider when relying on the report and the Report Content.

Where we have sought to address the impact of the COVID-19 Outbreak in the Report, we have had to make estimates, assumptions, conclusions and judgements that (unless otherwise specifically stated in the Report) are not directly supported by available and reliable data and information. Any Report Content addressing the impact of the COVID-19 Outbreak on the asset(s) and any associated business operations to which the report relates or the Australian economy more broadly is (unless otherwise specifically stated in the Report) unsupported by specific and reliable data and information and must not be relied on.

To the maximum extent permitted by law, Urbis (its officers, employees and agents) expressly disclaim all liability and responsibility, whether direct or indirect, to any person (including the Instructing Party) in respect of any loss suffered or incurred as a result of the COVID-19 Outbreak materially impacting the Report Content, but only to the extent that such impact is not reflected in the data and information used to support the Report Content.

TOWN OF VICTORIA PARK
